Canadian Manuscript Report of Fisheries and Aquatic Sciences

Manuscript reports contain scientific and technical information that contributes to existing knowledge but which deals with national or regional problems. Distribution is restricted to institutions or individuals located in particular regions of Canada. However, no restriction is placed on subject matter, and the series reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Manuscript reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report is abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-900 in this series were issued as Manuscript Reports (Biological Series) of the Biological Board of Canada, and subsequent to 1937 when the name of the Board was changed by Act of Parliament, as Manuscript Reports (Biological Series) of the Fisheries Research Board of Canada. Numbers 1426 - 1550 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Manuscript Reports. The current series name was changed with report number 1551.

Manuscript reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport manuscrit canadien des sciences halieutiques et aquatiques

Les rapports manuscrits contiennent des renseignements scientifiques et techniques qui constituent une contribution aux connaissances actuelles, mais qui traitent des problèmes nationaux ou régionaux. La distribution en est limitée aux organismes et aux personnes de régions particulières du Canada. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports manuscrits peuvent être cités comme des publications complètes. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports manuscrits sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annual des publications scientifiques et techniques du Ministère.

Les numéros 1 à 900 de cette série ont été publiés à titre de manuscrits (série biologique) de l'Office de biologie du Canada, et après le changement de la désignation de cet organisme par décret du Parlement, en 1937, ont été classés comme manuscrits (série biologique) de l'Office des recherches sur les pêcheries du Canada. Les numéros 901 à 1425 ont été publiés à titre de rapports manuscrits de l'Office des recherches sur les pêcheries du Canada. Les numéros 1426 à 1550 sont parus à titre de rapports manuscrits du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 1551.

Les rapports manuscrits sont produits a l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Hop Wo, L., C.H.P McConnell and A. Ryan. 2000. Johnstone Strait, Strait of Georgia and Juan de Fuca Strait sockeye and pink test fishing data for 1986-2000. Can. Data Rep. Fish. Aquat. Sci. 1066 : vi + 209 p.

Test fishery operations during sockeye and pink migration in southern British Columbia are reported for years 1986 to 2000. Weekly summaries and daily set information on catch, effort and location for gill net and purse seine test fisheries are presented.

RÉSUMÉ

Hop Wo, L., C.H.P McConnell and A. Ryan. 2000. Johnstone Strait, Strait of Georgia and Juan de Fuca Strait sockeye and pink test fishing data for 1986-2000. Can. Data Rep. Fish. Aquat. Sci. 1066 : vi + 209 p.

Les operations sur des pêches expérimentales effectuées, entre 1986 et 2000, durant la migration du saumon rouge et du saumon rose dans le Sud de la Colombie-Britannique sont presentées. Des comptes-rendus hebdomadaires et des information quotidiennes sur les prises, effort et lieux de pêche pour lescoup de filets de sennes et filets maillants sont presentés.

INTRODUCTION

This report summarizes test fishing results directed by Fisheries and Oceans Canada (DFO). Purse seine and gill net test fishing is conducted in areas of southern British Columbia. Test fishing for Fraser sockeye occurs annually in several marine areas around Vancouver Island. In addition, testing for Fraser pink occurs in odd years and Mainland Inlet pink generally occur on even years. Detailed catch data is presented for the sockeye and pink test fishing programs in the regions of Johnstone Strait, the Strait of Georgia and Juan de Fuca Strait (Figure 1).

The report provides daily catch data, summarized weekly catches and collates sampling data by set at each location for the respective seine and gill net test fisheries. This information is recorded, compiled and evaluated to provide information on abundance, migration timing, harvest rates, stock identification, and diversion rate of respective stocks.

In general, a sampler is on board the vessel during each test day to record catch and obtain biological samples. The test vessel operation frequently depends on the intensity of the run and does not operate during commercial fishery openings.

The information is used to manage the harvest of sockeye and pink stocks in Johnstone, Georgia, and Juan de Fuca Straits. The test fisheries are essential for stock conservation and harvest management. These testing programs operate in co-operation with Pacific Salmon Commission (PSC) staff, First Nation groups and members of the Fishing Industry.

DESCRIPTION OF TEST FISHERIES

Johnstone Strait Test Fisheries

Blinkhorn Sockeye Seine (Statistical Area 12)

In upper Johnstone Strait, the Blinkhorn seine test fishery (Figure 2) has been conducted annually since 1986, with the exception of years 1988 and 1992 (Richardson and Hop Wo, 1993 unpublished). The program operates in co-operation with the PSC (Fraser Panel). A standardized method of testing based upon specific set sites was developed during the initial years. This program provides the assessment information needed to assist in the harvest management of Fraser sockeye and pink salmon stocks.

Test fishing often began in mid August during the early years of operation, but more recently has been initiated in mid July. In the early years, testing was generally conducted for three days per week for the first three weeks and for five days per week for the duration of the program. In later years, testing has increased to 7 days per week due to the lack of commercial fisheries and the requirment for additional information.

Data analysis provides information on abundance, timing, age class structure, stock identification, and diversion rates of Fraser sockeye and pink salmon.

Round Island Sockeye Gill Net (Statistical Area 12)

This gill net test fishery started in 1986 (Figure 3) and operates annually in co-operation with the PSC (Fraser Panel). The program consists of a single gill net vessel operating in Lower Queen Charlotte Strait and the information is used to evaluate Fraser sockeye salmon stock composition, abundance and timing. Round Island testing normally occurs each day during the peak of the fishing season. In addition, stock composition information on non-Fraser sockeye stocks (Nimpkish) is estimated from the catch.

Area 13 Sockeye Seine (Statistical Area 13)

The Area 13 seine test fishing program (Figure 4) was initiated in 1995. The program includes two seine vessels in lower Johnstone Strait (Area 13). Each vessel operates 3-4 days consecutively per week to provide complete weekly coverage. This program provides data on abundance, harvest rates, timing, and stock identification for Fraser sockeye salmon passing through Johnstone Strait. Testing normally occurs from late July to late August. This is a co-operative program with the PSC (Fraser Panel).

Other Seine Test Fisheries

Several additonal test fishing programs are detailed in this report. Often, infrequent or single year programs are initiated to provide information for specific objectives. DFO has the sole responsibility for all of these programs.

Gordon Group Sockeye Seine (Statistical Area 12)

The Gordon Group is located in the northwestern portion of Statistical Area 12 (Figure 5). Commercial seine fisheries have not occurred in this area on sockeye since 1994. In 1994, a seine test fishery was initiated in this area, with the goal of identifying suitable test fishing areas, similar to those in the Blinkhorn (Area 12) and Lower Johnstone Strait (Area 13) seine test areas.

Double Bay Sockeye Seine (Statistical Area 12)

The Double Bay test fishery occurred in Statistical Area 12, primarily on the East Coast of Hanson Island, in 1998 (Figure 2). Testing was initiated in this area to provide additional data due to the absence of commercial fishery information.

Mainland Inlet Pink Seine (Statistical Area 12)

Test fishing for pink salmon in the Mainland Inlets across from Northern Vancouver Island has occurred since 1988. A seine vessel test fishes in the area from Wells Passage to Knights Inlet (Figure 6). Testing generally occurs during even numbered years, with the exception of 1989, and lasts from late July to mid August.

Lower Strait of Georgia Sockeye Seine (Statistical Areas 18 and 29)

The lower Strait of Georgia test fishery operated in the outer portion of Area 29 and Area 18 (Figure 7) in 1999. Historically, commercial fisheries have occurred in these areas. In Area 18, commercial fisheries have occured since 1979. The most recent Area 29 commercial seine fisheries occurred in 1991. This test fishery was initiated to explore areas to harvest sockeye, with minimal impact on coho and chinook bycatch.

San Juan Sockeye Seine (Statistical Area 20)

In 1997 a DFO test fishing program in San Juan (Juan de Fuca Strait) was initiated (Figure 8). The main objective of this test fishery was to examine bycatch levels in commercial fishing areas prior to any fishing opportunities. In addition, some alternate non traditional fishing sites and areas were tested.

METHOD

Data Collection

Purse Seine

Purse seine test fishing programs in Johnstone Strait, Strait of Georgia or Juan de Fuca Strait use licensed commercial salmon vessels. Vessel owners submitted tender bids in response to a public "Invitation" and successful candidates were chosen based upon charter selection criteria, Advisory Board Committee members approval, and the cost to the resource in target species payment catch.

In a manner consistent with DFO test fishing policy and guidelines, a departmental employee or services contract representative was on board each vessel for the duration of the program. The observers duties involved the collection of biological samples and recording of all catch data including date, time, set location, number of sets and catch by species. Monitoring of the collection and disbursement of test payment fish was also required.

Set locations were determined following a preassigned and standardized list of fishing sites. In the event weather conditions or other unusual situations restricted the normal test routine, an alternative action or site location was chosen. Catch by species for each set location were numerically estimated by "drying up" the "pursed" seine net along side the vessels. The majority of the catch was counted then release unharmed. Only those fish required for payment of the charter or needed for biological disection were retained.

The standard 'inside' sockeye seine net was used in all areas except Juan de Fuca Strait. A west coast 'outside' net was used in the Juan de Fuca (San Juan) test fishery. The standard 'inside' seine net measures 400 metres in overall length and 52 metres in depth with a mesh size of not less than 76 millimetres bunt size. The west coast net measures 550 metres in length, 80 metres (max) in depth and has a mesh size of not less than 100 millimetres bunt size.

Gill Net

Gill net vessels with commercial salmon fishing licences are perodically selected to conduct DFO test fisheries. Gill net charter selection generally follows a similar proceedure to seine charter selection. The selection of each successful candidate is based primarily upon past test fishing experience, cost and personal suitability.

The Area 12 gill netter has a DFO observer on board most of the time. The data collection includes time, location, catch by set and species and biological sampling which was recorded by the observer and forwarded daily to fishery management staff. The gill net test program at Round Island was initiated in 1986 and initially utilized a standard commercial multi strand 5 1/8 inch net. Later the net was replaced by a multi-panel net, mesh size 4 7/8, 5 and 5 1/8 inch panels. The net length is a standard 200 fathoms long and 60 meshes deep. In general, all fish are retained and used to pay for the operation of the vessel. In recent years, specific by-catch species have been released if brought aboard live.

ORGANIZATION OF REPORT

The data in this report is presented separately for seine and gill net test fisheries. The information for each gear type is organized by test fishery and geographic area. Information from each test fishery is reported in three separate formats. The first, a summary table of annual catches by day and week, along with the daily and weekly number of sets. The second table lists the frequency of each set made at a specific set site and the total catch by set site. Location codes are indentified by combining the statistical area (2 digits) and site location (3 digits). The third table details the raw data which includes information on date, location, set times, and catch counted for all salmon species. Note, the majority of seine catch is released and the majority of gill net catch is retained.

ACKNOWLEDGEMENTS

The authors wish to thank all DFO staff (Doug Brouwer, Al Gould, Alvin Sewid, Alf Stefanson) for their assistance in intitiating and setting up the test fishing programs, as well as Paul Ryall for his support in these programs. A special thank you is extended to all charter vessel skippers (Brian Assu, Henry Beans, Joe Boroevich, Bob Charlie, Jake Fraser, Don Haines, Helmer Hofstad, Alfred Hunt, Fred Jolliffe, Kenny Jolliffe, Bruce Lansdowne, Wayne Martinolich, Harvey Pike, Bobby Sewid, Julian Stauffer, Norman Stauffer, Ray Thompson, David Uhl), their crew and the observers (Vern Arneil, Ed Attridge, Glen Bowden, Ken Boxer, Alan Dunlop, Nolan Hop Wo, Adrian Ladouceur, Bill Mancell, Ed Matko, Peter Midgley, Ward Prince, Jocelyn Rak, Andre Robichaud, Bryan Rusch, Pete Sainas, Dennis Smith, Derrick Stevenson, Mike Stevenson, Charles Thirkill, Debbie Tufnail, Cathy West, Ellizabeth Waller, Patrik Zetterberg). Also, thanks to Clyde Murray for reviewing and editing this report.
